

Saturday May 28 08:30 -17:00

The Golden Circle, Hellisheiði Geothermal Plant and exhibition

08:30, Guided tour from Reykjavík,

- 1) Hellisheiði Geothermal Plant
- 2) Kerið
- 3) Geysir
- 4) Gullfoss
- 5) Þingvellir (National park)
- 6) Reykjavík.

Hellisheiði Geothermal Plant is situated at the Hengill area, an active volcanic ridge in SW Iceland. Geothermal activity in the Hengill area is connected with three volcanic systems. At least three volcanic eruptions have occurred in the Hengill area in the last 11,000 years, the most recent being 2,000 years ago. The Hengill area is part of the Hengill region, which covers 112 square kilometers and is one of the most extensive geothermal areas in Iceland

The waterfall Gullfoss and Geysir the geothermal field needs little introduction: it includes some of Iceland's most stunning sights. You will see the hot spring Strokkur shoot a column of water up to 30 metres (98 ft.) into the air every 4-8 minutes – a thrilling experience that just never gets old. We also visit the magnificent Gullfoss (Golden Falls) waterfall, created where the river Hvítá tumbles and plunges into a crevice some 32 m (105 ft.) deep.

The Golden Circle tour includes also the historical and geological wonder that is Thingvellir National Park, where the American and Eurasian tectonic plates are pulling apart at a rate of a few centimetres per year.

Price pr. passenger 14.900

Included: Bus, guidance, lunch and admission to the geothermal exhibition.

Minnum 20 pax
